Thanks for the great conversation today!

Attached is the Pyrethroid Ecological Risk Mitigation Proposal. This includes a lot of rationale as to why we are moving forward with certain mitigation measures. However, for the label language/label tables specifically, the latest Amended ID for one of the other pyrethroids has the latest label table since some issues did come up during implementation. Search the reg review docket for another pyrethroid like deltamethrin or bifenthrin to get the latest LT.

Also attached is the doc we went through today that outlines what the current state of generic mitigation is.

If you have any questions if you go along in this process, just hit me up!
